Organizational Groupings Hardware Structure Framing Cables Anchors Wires Preferred Wires Disclaimer Management Tools

The Data Manager allows the User and Organizations to make the most use out of Quick Pole by enabling access to a variety of different standards. Quick Pole can be configured to only serve the needs of one Utility or Region, or as many as required.

To accomplish this, there is a Master set of Data that is managed by Sonideft and is pushed to all users as updates on a regular basis. There may also be some Major Utility standards that a lot of users enjoy that would also be managed by Sonideft. Those specific lists cannot be changed by Users, but copies of them can be taken and adjusted as required under a different set of data

The way this flexibility is enabled starts with the definition of an Organization Group; which creates a Dataset. The User Dataset is created in advance for most Users to place their own data. Under each Dataset, several other sets of data can be stored by the User or by Sonideft to assist the majority of Users. Each Tab in this Window permits viewing, editing or creation of a different type of Data.

The Preferred Wires Tab works a little different than the others in that it allows the User to select which Wires it would like to be able to choose from, with specific Installation tension and temperature. This way the same wire can be used by different Organizations strung to different parameters.

#	Description	Service Span (ft)	Urban Span (ft)	Rural Span (ft)	# Hardware	# Framing	# Cables	# Anchors	# Wires	# Wires Preferred
